

SYN LD

Multiguard Syn LD is a synthetic cutting and grinding fluid designed for ferrous materials, and particularly for those shops that prefer to use an oil-free product. It has been formulated to provide excellent cooling and corrosion inhibition properties in light duty grinding and machining of ferrous metals for "stand-alone" machines and central systems.

APPLICATION

Multiguard Syn LD is ideal for grinding applications such as centerless, ID, OD and Blanchard grinding. It is extremely low foaming, making it an excellent choice for high pressure applications. Multiguard Syn LD can also be used for light duty machining of cast iron and mild steels. It is not recommended for non-ferrous metal applications.

PERFORMANCE BENEFITS

- Extremely low foaming in high pressure and flood type applications.
- Excellent corrosion and microbial control.
- Low odor and mist.
- Rejects tramp oil for long sump life.
- Oil free for easy recycling or disposal.
- Low carry off for reduced concentrate usage.
- Clear mix for good part visibility.
